Reply to Office Action of: July 24, 2003

## **AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions, and listings of claims in the application:

Claim 1 (Currently Amended): A propylene polymer copolymer having:

- (1) a 25°C hexane soluble content (H25) of 0-80 wt%; and,
- (2) either no melting temperature (Tm) measurable by differential scanning calorimetry (DSC), or a melting temperature (Tm) satisfying, if measurable by DSC, the following relationship:

$$\Delta H \ge 3 \times (Tm - 120)_{-3}$$

wherein  $\Delta H$  is a melting endotherm (J/g).

Claim 2 (Canceled).

Claim 3 (Currently Amended): <u>The A propylene homopolymer according to claim 31</u>, satisfying:

- (1) a mesopentad fraction (mmmm) of 30-60 mol%;
- (2) a racemic pentad fraction (rrrr) satisfying the following relationship:

$$[rrrr/(1-mmmm)] \leq 0.1$$

$$\{rrrr/(1-mmmm)\} \leq 0.1$$

- (3) a fraction (W25) eluted at a temperatures up to 25°C by temperatureprogrammed chromatography, of from 20-100 wt%; and,
  - (4) a pentad fraction (rmrm) of more than 2.5 mol%.

Claim 4 (Original): The propylene homopolymer according to claim 3, satisfying the following relationship:

Reply to Office Action of: July 24, 2003

$$(mm) x (rr)/(mr)^2 \le 2.0$$

wherein (mm) is a meso triad fraction; (rr) is a racemic triad fraction; and (mr) is a triad fraction.

Claim 5 (Currently Amended): The propylene homopolymer according to claim 3, having a molecular weight distribution (Mw/Mn) of 4 or less as measured by gel permeation chromatography (GPC) and/or an intrinsic viscosity  $\{\eta\}$  ( $\eta$ ) of from 0.5-15.0 dl/g as measured at 135°C in tetralin.

Claim 6 (Currently Amended): A <u>The</u> propylene copolymer <u>according to</u> <u>claim 1</u>, satisfying:

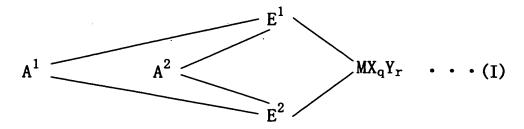

- (1) a stereoregularity index (P) of 55-90 mol% as determined by <sup>13</sup>C-NMR measurement; and
- (2) a fraction (W25) eluted at a temperatures up to 25°C by temperature-programmed chromatography, of from 20-100 wt%.

Claim 7 (Currently Amended): The propylene copolymer according to claim 6 having a molecular weight distribution (Mw/Mn) of 4 or less as measured by gel permeation chromatography (GPC) and/or an intrinsic viscosity [ $\eta$ ] ( $\eta$ ) of from 0.5-15.0 dl/g as measured at 135°C in tetralin.

Claim 8 (Currently Amended): The propylene homopolymer according to claim 3 produced by polymerizing propylene in the presence of a polymerization catalyst containing:

(A) a transition metal compound represented by the general formula (I):

Reply to Office Action of: July 24, 2003

wherein M is a metal element of Groups 3 to 10 of the Period Table or lanthanoid series;

E<sup>1</sup> and E<sup>2</sup> are respectively a ligand selected from the group consisting of substituted cyclopentadienyl, indenyl, substituted indenyl, heterocyclopentadienyl, substituted heterocyclopentadienyl, amide, phosphide, a hydrocarbon group and a silicon-containing group, which form a cross-linked structure via A<sup>1</sup> and A<sup>2</sup> and may be the same or different;

X is a ligand capable of forming a  $\underline{\sigma\text{-bond}}$  or  $\pi\text{-bond}$  or  $\pi\text{-bond}$  with the proviso that when a plurality of X groups are present, these groups may be the same or different, and may be cross-linked with the other X group,  $E^1$ ,  $E^2$  or Y;

Y is a Lewis base with the proviso that when a plurality of Y groups are present, these groups may be same or different, and may be cross-linked with the other Y group,  $E^1$ ,  $E^2$  or X;

 $A^1$  and  $A^2$  are divalent cross-linking groups capable of bonding the two ligands  $E^1$  and  $E^2$  to each other, are respectively a  $C_1$ - $C_{20}$  hydrocarbon group, a  $C_1$ - $C_{20}$  halogen-containing hydrocarbon group, a silicon-containing group, a germanium-containing group, a tin-containing group, -O-, -CO-, -S-, -SO<sub>2</sub>-, -Se-, -NR<sup>1</sup>-, -PR<sup>1</sup>-, -P(O)R<sup>1</sup>-, -BR<sup>1</sup>- or -AlR<sup>1</sup>- wherein R<sup>1</sup> is a hydrogen atom, a halogen atom, a  $C_1$ - $C_{20}$  hydrocarbon group or a  $C_1$ - $C_{20}$  halogen-containing hydrocarbon group, and may be the same or different;

q is an integer of 1 to 5 given by the formula:

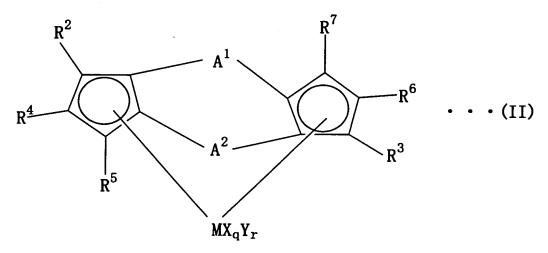

Reply to Office Action of: July 24, 2003

 $\frac{\text{[(valence of M)} - 2]}{\text{(valence of M)} - 2}$ ; and

r is an integer of 0 to 3, and

(B) a component selected from the group consisting of (B-1) a compound capable of forming an ionic complex by reacting with the transition metal compound (A) or a derivative thereof, (B-2) aluminoxane, and (B-3) a Lewis acid.

Claim 9 (Original): The propylene homopolymer according to claim 8, wherein the transition metal compound represented by the general formula (I) is a transition metal compound represented by the general formula (II):

wherein, M, X, Y,  $A^1$ ,  $A^2$ , q and r are the same as defined in the above general formula (I);  $R^2$  through  $R^7$  are respectively a hydrogen atom, a halogen atom, a  $C_1$ - $C_{20}$  hydrocarbon group, a  $C_1$ - $C_{20}$  halogen-containing hydrocarbon group, a siliconcontaining group or a heteroatom-containing group with the proviso that at least one of  $R^2$  through  $R^7$  is not a hydrogen atom; and  $R^2$  through  $R^7$  may be the same or different, and adjacent groups of  $R^2$  through  $R^7$  may be bonded to each other to form a ring.

Reply to Office Action of: July 24, 2003

Claim 10 (Original): The propylene homopolymer according to claim 8, wherein the transition metal compound represented by the general formula (I) is a transition metal compound represented by the general formula (II):

$$R^{2}$$
 $A^{1}$ 
 $R^{6}$ 
 $R^{5}$ 
 $MX_{q}Y_{r}$ 

wherein, M, X, Y,  $A^1$ ,  $A^2$ , q and r are the same as defined in the above general formula (I);  $R^2$  through  $R^7$  are respectively a hydrogen atom, a halogen atom, a  $C_1$ - $C_{20}$  hydrocarbon group, a  $C_1$ - $C_{20}$  halogen-containing hydrocarbon group, a siliconcontaining group or a heteroatom-containing group with the proviso that at least one of  $R^2$  through  $R^7$  is a group containing a heteroatom such as oxygen, halogen or silicon; and  $R^2$  through  $R^7$  may be the same or different, and adjacent groups of  $R^2$  through  $R^7$  may be bonded to each other to form a ring.

Claim 11 (Original): The propylene homopolymer according to claim 9, wherein the transition metal compound represented by the general formula (II) is a transition metal compound represented by the general formula (III):

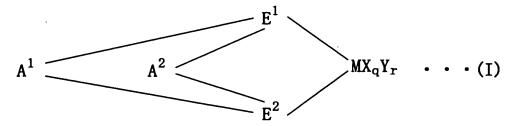

Reply to Office Action of: July 24, 2003

$$R^{11}$$
 $R^{10}$ 
 $R^{8}$ 
 $R^{10}$ 
 $R^{10}$ 

wherein, M, X, Y,  $A^1$ ,  $A^2$ , q and r are the same as defined in the above general formula (I); at least one of  $R^8$  and  $R^9$  represents a group containing a heteroatom such as oxygen, halogen or silicon; and  $R^{10}$  through  $R^{17}$  are respectively a hydrogen atom, a  $C_1$ - $C_{20}$  hydrocarbon group, or a group containing a heteroatom such as oxygen, halogen and silicon.

Claim 12 (Currently Amended): The propylene copolymer according to claim 6 produced by copolymerizing propylene with ethylene and/or a  $C_4$ - $C_{20}$   $\alpha$ -olefin in the presence of a polymerization catalyst comprising:

(A) a transition metal compound represented by the general formula (I):

wherein M is a metal element of Groups 3 to 10 of the Period Table or lanthanoid series;

E<sup>1</sup> and E<sup>2</sup> are respectively a ligand selected from the group consisting of substituted cyclopentadienyl, indenyl, substituted indenyl, heterocyclopentadienyl, substituted heterocyclopentadienyl, amide, phosphide, a hydrocarbon group and a

Reply to Office Action of: July 24, 2003

silicon-containing group, which form a cross-linked structure via  $A^1$  and  $A^2$  and may be the same or different;

X is a ligand capable of forming a  $\underline{\sigma\text{-bond}}$  or  $\pi\text{-bond}$  or  $\pi\text{-bond}$  with the proviso that when a plurality of X groups are present, these groups may be the same or different, and may be cross-linked with the other X group,  $E^1$ ,  $E^2$  or Y;

Y is a Lewis base with the proviso that when a plurality of Y groups are present, these groups may be same or different, and may be cross-linked with the other Y group,  $E^1$ ,  $E^2$  or X;

 $A^1$  and  $A^2$  are divalent cross-linking groups capable of bonding the two ligands  $E^1$  and  $E^2$  to each other, are independently a  $C_1$ - $C_{20}$  hydrocarbon group, a  $C_1$ - $C_{20}$  halogen-containing hydrocarbon group, a silicon-containing group, a germanium-containing group, a tin-containing group, -O-, -CO-, -S-, -SO<sub>2</sub>-, -Se-, -NR<sup>1</sup>-, -PR<sup>1</sup>-, -P(O)R<sup>1</sup>-, -BR<sup>1</sup>- or -AlR<sup>1</sup>- wherein R<sup>1</sup> is a hydrogen atom, a halogen atom, a  $C_1$ - $C_{20}$  hydrocarbon group or a  $C_1$ - $C_{20}$  halogen-containing hydrocarbon group, and may be the same or different;

q is an integer of 1 to 5 given by the formula:

 $\frac{\text{(valence of M)} - 2}{\text{(valence of M)} - 2}$ ; and

r is an integer of 0 to 3, and

(B) a component selected from the group consisting of (B-1) a compound capable of forming an ionic complex by reacting with the transition metal compound (A) or a derivative thereof, (B-2) aluminoxane, and (B-3) a Lewis acid.

Claim 13 (Original): The propylene copolymer according to claim 12, wherein the transition metal compound represented by the general formula (I) is a transition metal compound represented by the general formula (II):

Reply to Office Action of: July 24, 2003

$$R^{4}$$
 $A^{1}$ 
 $R^{6}$ 
 $R^{5}$ 
 $MX_{q}Y_{r}$ 

wherein, M, X, Y,  $A^1$ ,  $A^2$ , q and r are the same as defined in the above general formula (I);  $R^2$  through  $R^7$  are respectively a hydrogen atom, a halogen atom, a  $C_1$ - $C_{20}$  hydrocarbon group, a  $C_1$ - $C_{20}$  halogen-containing hydrocarbon group, a siliconcontaining group or a heteroatom-containing group with the proviso that at least one of  $R_2$  through  $R_7$  is not a hydrogen atom; and  $R_2$  through  $R_7$  may be the same or different, and adjacent groups of  $R_2$  through  $R_7$  may be bonded to each other to form a ring.

Claim 14 (Original): The propylene copolymer according to claim 12, wherein the transition metal compound represented by the general formula (I) is a transition metal compound represented by the general formula (II):

$$R^4$$
 $A^1$ 
 $R^6$ 
 $A^2$ 
 $R^3$ 
 $MX_qY_r$ 

Reply to Office Action of: July 24, 2003

wherein, M, X, Y,  $A^1$ ,  $A^2$ , q and r are the same as defined in the above general formula (I);  $R^2$  through  $R^7$  are respectively a hydrogen atom, a halogen atom, a  $C_1$ - $C_{20}$  hydrocarbon group, a  $C_1$ - $C_{20}$  halogen-containing hydrocarbon group, a siliconcontaining group or a heteroatom-containing group with the proviso that at least one of  $R^2$  through  $R^7$  is a group containing a heteroatom such as oxygen, halogen or silicon; and  $R^2$  through  $R^7$  may be the same or different, and adjacent groups of  $R^2$  through  $R^7$  may be bonded to each other to form a ring.

Claim 15 (Original): The propylene copolymer according to claim 13, wherein the transition metal compound represented by the general formula (II) is a transition metal compound represented by the general formula (III):

$$R^{11}$$
 $R^{10}$ 
 $R^{8}$ 
 $R^{17}$ 
 $R^{16}$ 
 $R^{12}$ 
 $R^{13}$ 
 $R^{13}$ 
 $R^{13}$ 
 $R^{14}$ 
 $R^{15}$ 
 $R^{15}$ 

wherein, M, X, Y,  $A^1$ ,  $A^2$ , q and r are the same as defined in the above general formula (I); at least one of  $R^8$  and  $R^9$  represents a group containing a heteroatom such as oxygen, halogen or silicon; and  $R^{10}$  through  $R^{17}$  are respectively a hydrogen atom, a  $C_1$ - $C_{20}$  hydrocarbon group, or a group containing a heteroatom such as oxygen, halogen and silicon.

Claim 16 (Canceled).

Reply to Office Action of: July 24, 2003

Claim 17 (Original): A propylene resin composition comprising the propylene homopolymer according to claim 3 and a nucleating agent.

Claim 18 (Original): A propylene resin composition comprising the propylene copolymer according to claim 6 and a nucleating agent.

Claims 19-20 (Canceled).

Claim 21 (Original): A molded product produced by molding the propylene homopolymer according to claim 3.

Claim 22 (Original): A molded product produced by molding the propylene resin composition according to claim 17.

Claim 23 (Original): A molded product produced by molding the propylene copolymer according to claim 6.

Claim 24 (Original): A molded product produced by molding the propylene resin composition according to claim 18.

Claim 25 (Canceled).

Claim 26 (Original): A propylene resin modifier comprising the propylene homopolymer according to claim 3.

Reply to Office Action of: July 24, 2003

Claim 27 (Original): A propylene resin modifier comprising the propylene copolymer according to claim 6.

Claim 28 (Currently Amended): A polymerization catalyst comprising:

(A') a transition metal compound represented by the general formula (II):

$$R^{4}$$
 $R^{5}$ 
 $MX_{q}Y_{r}$ 
 $R^{7}$ 
 $R^{6}$ 
 $MX_{q}Y_{r}$ 

wherein M is a metal element of Groups 3 to 10 of the Period Table or lanthanoid series;

E<sup>1</sup> and E<sup>2</sup> are respectively a ligand selected from the group consisting of substituted cyclopentadienyl, indenyl, substituted indenyl, heterocyclopentadienyl, substituted heterocyclopentadienyl, amide, phosphide, a hydrocarbon group and a silicon-containing group, which form a cross-linked structure via A<sup>1</sup> and A<sup>2</sup> and may be the same or different;

X is a ligand capable of forming a  $\sigma$ -bond or  $\pi$ -bond with the proviso that when a plurality of X groups are present, these groups may be the same or different, and may be cross-linked with the other X group,  $E^1$ ,  $E^2$  or Y:

Y is a Lewis base with the proviso that when a plurality of Y groups are present, these groups may be same or different, and may be cross-linked with the other Y group, E<sup>1</sup>, E<sup>2</sup> or X;

Reply to Office Action of: July 24, 2003

A<sup>1</sup> and A<sup>2</sup> are divalent cross-linking groups capable of bonding the two ligands E<sup>1</sup> and E<sup>2</sup> to each other, are respectively a  $C_1$ - $C_{20}$  hydrocarbon group, a  $C_1$ - $C_{20}$  halogen-containing hydrocarbon group, a silicon-containing group, a germanium-containing group, a tin-containing group, -O-, -CO-, -S-, -SO<sub>2</sub>-, -Se-, -NR<sup>1</sup>-, -PR<sup>1</sup>-, -P(O)R<sup>1</sup>-, -BR<sup>1</sup>- or -AlR<sup>1</sup>- wherein R<sup>1</sup> is a hydrogen atom, a halogen atom, a  $C_1$ - $C_{20}$  hydrocarbon group or a  $C_1$ - $C_{20}$  halogen-containing hydrocarbon group, and may be the same or different;

q is an integer of 1 to 5 given by the formula:

 $\{(valence of M) - 2\}$ ; and

r is an integer of 0 to 3, and M, X, Y,  $A^{1}$ ,  $A^{2}$ , q and r are the same as defined in the above general formula (I);  $R^{2}$  through  $R^{7}$  are respectively a hydrogen atom, a halogen atom, a  $C_{1}$ - $C_{20}$  hydrocarbon group, a  $C_{1}$ - $C_{20}$  halogen-containing hydrocarbon group, a silicon-containing group or a heteroatom-containing group with the proviso that at least one of  $R^{2}$  through  $R^{7}$  is not a hydrogen atom; and  $R^{2}$  through  $R^{7}$  may be the same or different, and adjacent groups of  $R^{2}$  through  $R^{7}$  may be bonded to each other to form a ring, and

(B) a component selected from the group consisting of (B-1) a compound capable of forming an ionic complex by reacting with the transition metal compound (A) or a derivative thereof, (B-2) aluminoxane, and (B-3) a Lewis acid.

Claim 29 (Currently Amended): A polymerization catalyst comprising:

(A') a transition metal compound represented by the general formula (II):

Reply to Office Action of: July 24, 2003

$$R^{4}$$
 $A^{1}$ 
 $A^{2}$ 
 $R^{3}$ 
 $MX_{q}Y_{r}$ 

wherein M is a metal element of Groups 3 to 10 of the Period Table or lanthanoid series;

E<sup>1</sup> and E<sup>2</sup> are respectively a ligand selected from the group consisting of substituted cyclopentadienyl, indenyl, substituted indenyl, heterocyclopentadienyl, substituted heterocyclopentadienyl, amide, phosphide, a hydrocarbon group and a silicon-containing group, which form a cross-linked structure via A<sup>1</sup> and A<sup>2</sup> and may be the same or different;

X is a ligand capable of forming a  $\sigma$ -bond or  $\pi$ -bond with the proviso that when a plurality of X groups are present, these groups may be the same or different, and may be cross-linked with the other X group,  $E^1$ ,  $E^2$  or Y;

Y is a Lewis base with the proviso that when a plurality of Y groups are present, these groups may be same or different, and may be cross-linked with the other Y group, E<sup>1</sup>, E<sup>2</sup> or X;

A<sup>1</sup> and A<sup>2</sup> are divalent cross-linking groups capable of bonding the two ligands E<sup>1</sup> and E<sup>2</sup> to each other, are respectively a  $C_1$ - $C_{20}$  hydrocarbon group, a  $C_1$ - $C_{20}$  halogen-containing hydrocarbon group, a silicon-containing group, a germanium-containing group, a tin-containing group, -O-, -CO-, -S-, -SO<sub>2</sub>-, -Se-, -NR<sup>1</sup>-, -PR<sup>1</sup>-, -P(O)R<sup>1</sup>-, -BR<sup>1</sup>- or -AlR<sup>1</sup>- wherein R<sup>1</sup> is a hydrogen atom, a halogen atom, a  $C_1$ - $C_{20}$ 

Reply to Office Action of: July 24, 2003

hydrocarbon group or a  $C_1$ - $C_{20}$  halogen-containing hydrocarbon group, and may be the same or different;

q is an integer of 1 to 5 given by the formula:

 $\{(valence of M) - 2\}$ ; and

r is an integer of 0 to 3, and M, X, Y,  $A^1$ ,  $A^2$ , q and r are the same as defined in the above general formula (I);  $R^2$  through  $R^7$  are respectively a hydrogen atom, a halogen atom, a  $C_1$ - $C_{20}$  hydrocarbon group, a  $C_1$ - $C_{20}$  halogen-containing hydrocarbon group, a silicon-containing group or a heteroatom-containing group with the proviso that at least one of  $R^2$  through  $R^7$  is a group containing a heteroatom such as oxygen, halogen or silicon; and  $R^2$  through  $R^7$  may be the same or different, and adjacent groups of  $R^2$  through  $R^7$  may be bonded to each other to form a ring, and

(B) a component selected from the group consisting of (B-1) a compound capable of forming an ionic complex by reacting with the transition metal compound (A) or a derivative thereof, (B-2) aluminoxane, and (B-3) a Lewis acid.

Claim 30 (Currently Amended): A polymerization catalyst comprising:

(A") a transition metal compound represented by the general formula (III):

$$R^{11}$$
 $R^{10}$ 
 $R^{8}$ 
 $R^{17}$ 
 $R^{16}$ 
 $R^{15}$ 
 $R^{15}$ 
 $R^{15}$ 
 $R^{15}$ 

Reply to Office Action of: July 24, 2003

wherein, M is a metal element of Groups 3 to 10 of the Period Table or lanthanoid series;

E<sup>1</sup> and E<sup>2</sup> are respectively a ligand selected from the group consisting of substituted cyclopentadienyl, indenyl, substituted indenyl, heterocyclopentadienyl, substituted heterocyclopentadienyl, amide, phosphide, a hydrocarbon group and a silicon-containing group, which form a cross-linked structure via A<sup>1</sup> and A<sup>2</sup> and may be the same or different;

X is a ligand capable of forming a  $\sigma$ -bond or  $\pi$ -bond with the proviso that when a plurality of X groups are present, these groups may be the same or different, and may be cross-linked with the other X group,  $E^1$ ,  $E^2$  or Y;

a hydrogen atom, a  $C_1$ - $C_{20}$  hydrocarbon group, or a group containing a heteroatom such as oxygen, halogen and silicon, and

(B) a component selected from the group consisting of (B-1) a compound capable of forming an ionic complex by reacting with the transition metal compound (A) or a derivative thereof, (B-2) aluminoxane, and (B-3) a Lewis acid.

Claim 31 (New): A propylene homopolymer having:

- (1) a 25°C hexane soluble content (H25) of 0-80 wt%;
- (2) neither a melting temperature (Tm) nor a melting endotherm ( $\Delta H$ ) measurable by differential scanning calorimetry (DSC).

Reply to Office Action of: July 24, 2003

## **BASIS FOR THE AMENDMENT**

Claims 2, 16, 19, 20 and 25 have been canceled.

Claims 8, 12 and 28-30 have been amended as supported at page 19, line 2 from the bottom.

New Claim 31 has been added as supported at page 14, lines 4-21 and by Claim 1 as originally filed. "No melting temperature Tm measurable by DSC means that a melting endotherm  $\Delta H$  is not observed as supported at page 14, lines 9-21, by Example 1-3 in Table 2-1, and by Example 13-16 in Table 5-1.

No new matter is believed to have been added by entry of this amendment.

Entry and favorable reconsideration are respectfully requested.

Upon entry of this amendment Claims 1, 3-15, 17-18, 21-24 and 26-31 will now be active in this application.
